

Pain Point Table – AS-IS System

✓ Pain Point Table

#	Process Area	Pain Point (AS-IS)	Root Cause	Impact	Solution (TO-BE Link)
1	Monetization	No revenue or earning logic for creators	System only logs engagement, no payment integration	Creators have no motivation to produce content	Add Revenue Distribution Engine to handle 7 revenue streams (ads, paid, sub, referral, etc.)
2	Financial Tracking	No financial data or transaction records	No wallet or transaction entity in database	No transparency or payout history	Add Wallet Module (creator + referrer) and Transaction Table
3	User Engagement	Users only interact (like/comment), no benefit	No incentive or referral mechanism	Low retention and limited organic growth	Introduce Referral System (user shares link, gets reward)
4	Creator Analytics	Creator dashboard only shows likes/views	No revenue aggregation or payout view	Creators can't measure income or performance	Build Earning Dashboard showing Total Earning, Revenue Share, Chapter Reports
5	Security / Validation	No identity verification or fraud prevention	User IDs not linked to verified payment account	Risk of fake referrals or payout fraud	Add Referral Validation + Fraud Prevention / ID Check step
6	Operational Efficiency	Manual publish, no payment flow	Monolithic process, no API link to gateways	Slow and error-prone updates	Integrate Payment Gateway API (Momo, ZaloPay, Bank) for automation
